## DETAILED ACTION

### *Allowable Subject Matter*

1. Claims 8, 10, 12 and 13 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### *Claim Rejections - 35 USC § 103*

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 7, 9, 11 and 17-19 rejected under 35 U.S.C. 103(a) as being unpatentable over Takagi (5,252,844) in view of Kimura et al. (6,657,531).

Regarding Claims 7, 9, 11 and 17-19, Takagi discloses a semiconductor device having a redundant circuit and method of manufacturing thereof where in Fig. 5, the required silicon substrate 13, required fuse 21, the required interlayer insulating film 19 and electrode 18 structures are disclosed. Takagi fails to disclose the required columnar insulator configuration and the voltage programmable fuse configuration. However, Kimura et al. disclose a fuse circuit using capacitors as fuse elements where in Fig. 2, element 35-n are columnar insulator structure and in claims 18, 35 and 36 voltage programmable fuse configuration are disclosed.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required columnar insulator configuration and

voltage programmable fuse configuration in Takagi as taught by Kimura et al. in order to have a semiconductor device with higher reliability.
